# AVW Case Study: Zach's

## CHALLENGE

Zach Hetsel, Owner and Operator of Zach's Instant Service Car Wash, purchased an existing site and needed to upgrade it to a high-performing site in under 2 months.

## SOLUTION

Luckily for Zach, the site already had some stainless steel AVW equipment installed. A few replaced parts and the 10-year-old equipment was back to running like new. For the rest of the site, Zach swapped the existing equipment with AVW's latest and greatest, including AVW's all stainless-steel dual belt conveyor. With the new system installed, Zach was able to reach his production goals of 190 cars/hour all while completing the project on his tight schedule of just 7 weeks.

## RESULTS

- A high-performing site in under 2 months
- Met production goals of 190 cars/hour
- Greatly improved site design and customer experience

## WHY AVW

- Stainless steel equipment built to last
- Work together with a team of experienced car wash experts
- 50+ years of equipment innovation
- Backed by reliable customer service and distributor support
